

Municipal Accounting Systems, Inc.

The **Wen-GAGE® Student Information System** is a Windows® based user-friendly student information product suite. The Wen-GAGE® Student Information System offers comprehensive data tracking and reporting for attendance, scheduling, grades, and transcripts. With additional features such as the Teacher Module and immunization, special education, and discipline tracking, the Wen-GAGE® Student Information System is the most complete student information solution for your school district.

Attendance: With the option to enter attendance manually, via scanner, using the grade book interface (please call for compatibility), and/or through the Wen-GAGE® SI Teacher Module, recording daily attendance could not be easier. Record attendance by half day or by period and let the system calculate the absences for your attendance reports. User defined reasons for the types of absences allow you to track excused, unexcused, medical, activity absences, etc.

Scheduling: Build your master schedule from the ground up using the automated scheduling features. The system can assign sections based on your course offerings, teacher certifications, and student course requests. The system can then schedule the students into the sections based on their requests of required, preferred elective, and alternate elective courses. Print various conflict reports to aid in perfecting your master schedule.

Grades: Increase the efficiency and effectiveness of the grade card process by choosing one of the following automated recording procedures: Wen-GAGE® SI Teacher Diskette, Wen-GAGE® SI Teacher Module, and/or grade book interface (please call for compatibility). Calculate GPA's based on a non-weighted, weighted, numeric, or numeric-weighted basis by simply selecting the type of GPA. Honor roll can be determined by selecting a combination of GPA and specific grade criteria.

Transcripts: Save time and effort in determining student graduation requirements by defining a graduation, college, or vocational plan. Print an official transcript or worksheet transcript showing remaining graduation requirements. Rank students based on a non-weighted, weighted, numeric, or numeric-weighted basis by simply selecting the type of GPA. Determine honor society candidates based on GPA and specific grade criteria across years.

Teacher Module: Allow teachers to input attendance, grades (progress, midterm, test, credit), and eligibility from their computer workstation. A user-friendly and password-protected interface allows teachers to quickly view and/or enter any of the above information while having strict access to their respective classes.

Additional Features: With the Wen-GAGE® SI System, you can also track student immunizations, special education information, and student discipline. Eligibility can be tracked with the option for a 2-week comparison to allow you to print students who are on probation or ineligible. Attendance letters can be defined to meet the specific attendance policy of your school district. You can also use the report designer to modify the predefined reports to your specifications by inserting graphics, changing fonts, and inserting or removing data fields.

“The Complete Student Information Solution”

Without ongoing program enhancement and technical software support, no system can truly serve you. By providing toll-free software support, ongoing workshops, user group meetings, a yearly user conference, and yearly program updates, we are unsurpassed in customer service.

Training: We believe that “hands on” training is the most effective method in learning a new software program. Our full time instruction coordinator has developed curriculum for each system based on feedback from the users of the software. We offer several levels of training to assist both beginner and advanced users of the Wen-GAGE® Student Information System.

User Groups: We also believe that communication and idea sharing are keys to successfully using a new software program. By belonging to a User Group in your area, you can “network” with other users of the Wen-GAGE® Student Information System. This will allow you to share ideas about various aspects of the system, contribute suggestions for enhancements to the software, and discuss emerging issues. A Municipal Accounting Systems, Inc. support representative will be available at the User Group Meetings to answer questions and help guide the meeting.

Communication Council Meeting: At the Communication Council Meeting, a Representative from each Area User Group meets with the programmers and other representatives from the Municipal Accounting Systems, Inc. staff. The Communication Council Representatives offer the suggestions from each Area User Group. This allows each user the opportunity to directly impact the enhancements made to the software.

Yearly User Conference: Municipal Accounting Systems, Inc. provides a Yearly User Conference for users of the software. At the Conference, classes are provided for discussing enhancements brought about by the Area User Group Meetings, Year End Closing Procedures, Advanced Reporting Classes, and Special Issue Sessions. Also, Municipal Accounting Systems, Inc. shares plans for future goals and objectives of the software.

Remote Web Browser Support: As another service to our customers, Municipal Accounting Systems, Inc. provides live, representative to customer, support via your web browser to help assist with your toughest support solutions.
